

The old timers in modeling are quite aware of this item but many of our younger members may have never seen a wheelbarrow on the lot. This was an important piece of equipment in the old days and we suggest several of these sitting around on your circus lot. Mr. Robinson has given you an excellent plan to build from and many deviations can be secured from the original plan in the scale of your choice. This item of circus equipment will give you a change of pace from wagons and tents, and could be a one or two evening project.
